Doc Type: Working Group Document
Title: $\quad$ Towards a default deterministic ordering for Egyptian Hieroglyphs
Source: Michael Everson
Status: Individual Contribution
Action: For consideration by JTC1/SC2/WG2 and UTC Date: 2007-08-31

In N3237 it was demonstrated that a binary sort of Egyptian Hieroglyphs would yield unexpected and impractical results for Egyptologists. While a dictionary sort is lexical and based on transcription, not transliteration, a default ordering for Egyptian Hieroglyphs can be devised using the typical transliteration which most of the Heiroglyphs have. Then determinatives without any phonetic reading can be left in binary order in such a scheme; typically these appear towards the end of a string so their significance is less than that of other characters.

This document presents a draft of Hieroglyphs with uniliteral, biliteral, and triliteral readings, ordered according to the Egyptian alphabet. Some characters have ore than one reading, and htere are some phonetic-determinatives and abbreviations which also have readings. Work is ongoing to compare a number of sources to settle on a "default" reading for polyvalent characters.

Here is listed the Egyptian alphabetical in its alphabetical order． Gardiner＇s transcription is used．
$3<\mathrm{i}<\mathrm{y}<\mathrm{e}<\mathrm{w}<\mathrm{b}<\mathrm{p}<\mathrm{f}<\mathrm{m}<\mathrm{n}<\mathrm{r}<\mathrm{h}<\mathrm{h}<\mathrm{h}<\underline{\mathrm{h}}<\mathrm{z}<\mathrm{s}<$ š $<\mathrm{k}<\mathrm{k}<\mathrm{g}<\mathrm{t}<\underline{\mathrm{t}}<\mathrm{d}<\underline{\mathrm{d}}$

Here is listed the Egyptian alphabetical order showing Hieroglyphs and UCS code points（as given in PDAM5）：

3 $13140<i$ i 131CC $<y$ M 131CD $\ll y$ ॥ 133E5＜e — $1309 \mathrm{D}<\mathrm{w} 13172 \ll \mathrm{w} \odot 133 \mathrm{EA}<\mathrm{b} 』 130 \mathrm{C} 0<\mathrm{p} \square 132 \mathrm{AB}<$ $\mathrm{f} \sim 13192<\mathrm{m} 13154<\mathrm{n}-\mathrm{m}_{-1} 13217<\mathrm{r} \circ 1308 \mathrm{~B}<\mathrm{h}$ 匹 $13255<\mathrm{h} \& 1339 \mathrm{~A}<\mathrm{h} \oplus 13405<\underline{\mathrm{h}} \propto 13122<\mathrm{z} \rightarrow 13284<\mathrm{s}$ ी $132 \mathrm{~F} 3<$ š $ص 1321 \mathrm{~A}<\mathrm{k} \triangle 1320 \mathrm{~F}<\mathrm{k} \backsim 133 \mathrm{~A} 0<\mathrm{g} \boxtimes 133 \mathrm{BB}<$ $\mathrm{t} \circ 133 \mathrm{CE}<\mathrm{t}=1337 \mathrm{E}<\mathrm{d} \propto 130 \mathrm{~A} 7<\mathrm{d}^{2}$ 〇 13194

Here is listed the Egyptian alphabetical order with uniliteral， biliteral，and triliteral contractions．The contractions are sorted as though spelled out，so for instance îw $\Delta 130 \mathrm{BB}$ is sorted as though written í $131 \mathrm{CC}+\mathrm{w}$ 13172．The less－than sign＂＂＂ indicates that a word is separated from other words at a second level．So while 4 separately，like $\mathrm{a}<\mathrm{b}<\mathrm{c}$ ：first all the 4 s ，then all the $\Omega \mathrm{s}$ and then all the ${ }^{3}$ s．Two less－than signs＂$\ll$＂however show that a word is sorted together with what precedes it；while and sort like $1 \mathrm{~b} \ \_$，they are intermixed（although the first precedes the second to break ties if the words are otherwise the same）．
