1 Introduction

This is a proposal to encode Diwani Siyaq Numbers in the Universal Character Set (ISO/IEC 10646). This document draws upon information originally presented in “Diwani Numerals: Towards a Model for Encoding Numerals of the Siyaq Systems” (N4119 L2/09-140). Please refer to N4119 for more information on the origins of the characters, the notation system, and specimens.

This proposal is to be reviewed in conjunction with the following documents:

- N4123 L2/11-270: Preliminary Proposal to Encode Indic Siyaq Numbers in the UCS
- N4124 L2/11-271: Preliminary Proposal to Encode Ottoman Siyaq Numbers in the UCS
- N4125 L2/11-272: Preliminary Proposal to Encode Persian Siyaq Numbers in the UCS

2 Proposal Details

2.1 Name and Allocation

The proposed characters belong to a block to be named ‘Diwani Siyaq Numbers’. The characters are to be encoded in the SMP at U+1ED50..1ED8F, which is allocated for left-to-right scripts.

2.2 Encoding Model

The most practical model for Diwani Siyaq Numbers is to encode characters for each number of the primary, tens, hundreds, thousands, and ten-thousands orders, as well as dependent number forms that are used for writing composite numbers (see N4119 for discussion of alternate models).

2.3 Characters Proposed

The following characters are proposed for encoding:

2.4 Character Names

Names for the Diwani Siyaq Numbers are assigned to reflect numeric values.

3 The Notation System

3.1 Structure

Diwani Siyaq Numbers represent units of a decimal positional system. The notation system is additive; the value of a numerical sequence is the sum of the values of the numbers that constitute it. There is no character for zero, which is inherent in the independent numbers for each decimal order.

3.2 Directionality

The numbers are written right-to-left in the regular manner of the Arabic script, which differs from the left-to-right directionality of Arabic digits.

3.3 Orthography

Diwani Siyaq Numbers are written according to the rules for expressing numbers in Arabic.

- *Independent Numbers* Independent numbers of the primary, tens, hundreds, and thousands units are written using the regular characters for the numbers. Higher orders are written as follows:
 1. *Hundred thousands* Numbers of this order are indicated using ONE, TWO, and dependent forms of THREE .. NINE followed by the sequence <٦ + ONE HUNDRED + الى ONE THOUSAND>, eg. 500,000 حمالف.
- *Composite Numbers* Composite numbers are written using ONE, TWO, and dependent forms of THREE .. NINE and TEN:
 1. *Same decimal order* The numbers are transposed, with the primary number written before the larger number. This rule governs the writing of numbers such as 13 لع, 14 لسوع, 15, حوع; 11,000 اعالى, 12,000 لاعالى, 13,000, لعاعالى; etc.

2. *Different decimal orders* The numbers are written in the regular order with the larger number preceding the primary number. This rule governs the writing of numbers such as 101 **١٠١**, 102 **١٠٢**, 103, **١٠٣**; 1,004 **١٠٠٤**, 1,005 **١٠٠٥**, 1,006 **١٠٠٦**; 1,700 **١٧٠٠**, 1,800 **١٨٠٠**, 1,900 **١٩٠٠**; etc.

3.4 Rendering

In general, Diwani Siyaq characters are ordered linearly, without any special rendering requirements. The basic exception is:

1. *Dependent Forms* The positioning of dependent forms is based upon the shape of the dependent number, eg. 12 **١٢**, 13 **١٣**, 14 **١٤**, 15 **١٥**, 16 **١٦**.
