# Final Proposal to Encode the Bhaiksuki Script in ISO/IEC 10646 

Anshuman Pandey<br>Department of History<br>University of Michigan<br>Ann Arbor, Michigan, U.S.A.<br>pandey@umich.edu

Dragomir Dimitrov<br>Fachgebiet Indologie und Tibetologie<br>Philipps-Universität Marburg<br>Marburg, Germany<br>dimitrov@staff.uni-marburg.de

April 23, 2014

## 1 Introduction

This is a proposal to encode the Bhaiksuki script in the Universal Character Set (ISO/IEC 10646). It replaces the following documents:

- N4121 L2/11-259 "Preliminary Proposal to Encode the Bhaiksuki Script in ISO/IEC 10646"
- N4469 L2/13-167 "Proposal to Encode the Bhaiksuki Script in ISO/IEC 10646"
- N4489 L2/13-194 "Revised Proposal to Encode the Bhaiksuki Script in ISO/IEC 10646"
- L2/14-036 "Revised Proposal to Encode the Bhaiksuki Script in ISO/IEC 10646"

This document is a revision of L2/14-036. Major changes include revision of the glyphs for certain vowel signs, the addition of two digits, and a second gap filler. Other changes include additional information on contextual forms of vowel signs and consonant letters, as well as digits.

## 2 Background

Bhaiksuki ( $\mathbf{S}_{\mathbf{S}}^{\mathbf{S}}$ bhaiksukī; Devanagari भैक्षुकी) is a Brahmi-based script that was used around the turn of the first millenium CE mainly in the present-day states of Bihar and West Bengal in India, as well as in regions that are now part of Bangladesh. Records have been also located in Tibet, Nepal, and Burma. The script is known variously as the 'Arrow-Headed Script' or 'Point-Headed Script' in English, 'Pfeilspitzenschrift' in German, and 'Śaramātrkā Lipi' in Hindi and modern Sanskrit. An older designation, 'Sindhu(ra)', has been used in Tibet for at least three centuries.

The script is attested exclusively in Buddhist textual materials. Only eleven inscriptions and four manuscripts written in this script are presently known to exist. These are the Bhaiksuki manuscripts of the Abhidharmasamuccayakārikā, Manicūdajātaka, Candrālaṃkāra, and at least one more Buddhist canonical text. The codex of the Abhidharmasamuccayakārikā was kept in Tibet in the 1940s, but it is now inaccessible and its exact place of preservation is currently unknown. The fourth codex was discovered in Tibet and was recently

Figure 1: Sites of inscriptions ( $¥$ ) and manuscripts $(*)$ and other places ( $(\circ)$ where Bhaiksuki has reportedly been used (from Dimitrov 2010: 52).
shown in a Chinese documentary; however, information about this manuscript is still limited. It is likely that additional materials in Bhaiksuki may become available in the future.

There has been scholarly interest in Bhaiksuki from the time that Cecil Bendall (1856-1906) presented the script to Western academic communities in the 1880s. In the 1890s, Bruno Liebich (1862-1939) made further advances through his study of the materials available at the time. More recently, the Bhaiksuki manuscript of the Manicūūdajātaka was studied by Albrecht Hanisch (2009) and the manuscript of the Candrālaṃkāra was presented by Dragomir Dimitrov (2010) in a facsimile edition. During the period 2004-2008 the Arrowheaded Script Project at the Philipps-Universität Marburg, Germany was engaged in research on Bhaiksuki and in developing resources for study of this script.

## 3 Script Details

### 3.1 Name

The name of the proposed script block is 'Bhaiksuki', which is the simplified Latin form of the transliterated Sanskrit name for the script, bhaiksukī.

### 3.2 Character Repertoire

The proposed 'Bhaiksuki' block consists of 97 characters. Character names are aligned with those used in other scripts encoded in the UCS. A code chart and names list are attached.

### 3.3 Representative Glyphs

The representative glyphs for most of the proposed Bhaiksuki characters are based upon letterforms used in the manuscript of the Candrālamkkāra; the exceptions are a few glyphs excerpted from the manuscript of the Maṇicūdajātaka, as well as two glyphs for digits derived from another Buddhist Sanskrit manuscript (see Section 3.15). The glyph shapes of the Candrālaṃkāra, as well as its character repertoire, are remarkably homogenous, if not identical, to those used in the available Bhaiksuki manuscripts. The script is fairly sophisticated and well-designed, possesses calligraphic qualities, and seems to be palaeographically quite conservative across the available sources with respect to modifications.

### 3.4 Structure

The general structure (phonetic order, mātrā reordering, use of virāma, etc.) of Bhaiksuki is similar to that of Devanagari. Some dependent vowel signs consist of two or three parts, which attach to the top and right of letters. Several vowel signs have alternative forms when they combine with certain consonants, and certain consonant-vowel sequences are written as ligatures. In some cases, consonant $+v i r a ̄ m a$ pairs are rendered using both a visible virāma and a special ligature. Consonant clusters are represented as conjuncts.

The structure of a Bhaiksuki consonantal syllable may be described as follows:

```
consonant [consonant]* [vowel sign] [CANDRABINDU | ANUSVARA] [VISARGA]
```

where there is one base consonant, which may occur in a conjunct with one or more consonants. The sources show conjuncts containing at least three consonants, but theoretically the number may be greater. According to the rules of the script, only one vowel sign may be used with a base consonant or conjunct. One of either the CANDRABINDU or ANUSVARA may occur with a consonant or vowel sign. The visarga may follow last.

### 3.5 Virāma

The VIRAMA is used for indicating the absence of the inherent vowel in a consonant letter. It is identical in function to the VIrama in Devanagari. Certain pairs of consonant + VIRAMA are rendered as both with visible VIrama and as a special ligature (see Section 3.9).

### 3.6 Vowels

There are 13 vowel letters:

| 3 | A | 3 | U | 2 | VOCALIC L | そ FU |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 等 | AA | $\leqslant$ | UU | Ct | E |  |
| ¢ฺ | I | 0 | VOCALIC R | 25 | AI |  |
| cos | II | W | VOCALIC RR | 3 | O |  |

The vowel letter＊vocalic ll is not attested，but space has been reserved for it．

## 3．7 Vowel Signs

There are 12 dependent vowel signs：

| ${ }^{s}$ | VOWEL SIGN AA | 3 | VOWEL SIGN UU | ४ | VOWEL SIGN E |
| :---: | :---: | :---: | :---: | :---: | :---: |
| － | VOWEL SIGN I | ¢ | VOWEL SIGN VOCALIC R | $\widehat{9}$ | VOWEL SIGN AI |
| A | VOWEL SIGN II | G | VOWEL SIGN VOCALIC RR | 『， | VOWEL SIGN O |
| J | VOWEL SIGN U | $8$ | VOWEL SIGN VOCALIC L | बे | VOWEL SIGN AU |

The＊vowel sign vocalic ll is not attested，but space has been reserved for it．
Some vowel signs are written using alternative forms when they occur with certain consonants．These con－ textual forms are described in Section 3．10．

## 3．8 Consonants

There are 33 consonant letters：

| 念 | KA | S | NYA | 0 | DHA | ＊ | LA |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| ＊ | KHA | ¢ | tTa | 3 | NA | ＊ | va |
| 5 | GA | 0 | TTHA | 15 | PA | \％ | SHA |
| 25 | GHA | ， | DDA | $\omega$ | PHA | 3 | SSA |
| 3 | NGA | 3 | DDHA | $\%$ | BA | ＊ | SA |
| \％ | CA | 3 | NNA | \＄ | BHA | 5 | HA |
| ＊ | CHA | S | TA | \％ | MA |  |  |
| 却 | JA | 0 | THA | $t$ | YA |  |  |
| स | JHA | 2 | DA | ＊ | RA |  |  |

Each consonant bears the inherent vowel $/ \mathrm{a} /$ ，which is silenced using Q virama．Consonant clusters are written as conjuncts（see Section 3．11）．

## 3．8．1 Contextual forms of consonants

The letters PA，YA，RA are slightly modified when they occur with specific vowel signs．

PA The letter Pa has the contextual form when it occurs with certain vowel signs．The regular form is used with：

| $3{ }^{3} p u$ | ＜ $\mathcal{V}^{\text {Pa，}}$ ，VOWEL SIGN U＞ |
| :---: | :---: |
| 3 30 $p \bar{u}$ | ＜$\sim^{\text {Pa，}}$ ，V VOWEL SIGN UU＞ |
| $3 \mathrm{H} p r$ | ＜PA， $\mathcal{W}^{\text {P }}$ VOWEL SIGN VOCALIC R＞ |
| 15 $p e$ | ＜ $\mathcal{L}_{\text {Pa，}}$ ¢ Vowel sign e＞ |
| $)^{2} p a i$ | ＜PA，هी vowel sign al＞ |
| 2s po | ＜v Pa，¢＞vowel sign o＞ |
| अ pau |  |

The alternative form is used with：

$$
\begin{aligned}
& \text { 会 } p \bar{a}<\boldsymbol{\mathcal { V }} \mathrm{Pa},{ }^{3} \text { vowel sign aA> }
\end{aligned}
$$

$$
\begin{aligned}
& \text { 会 } p \bar{\imath}<\boldsymbol{\mathcal { H }} \text { PA, 仓 VOWEL SIGN II> }
\end{aligned}
$$

This alternative shape also occurs in consonant conjuncts when PA is a non－initial consonant．
ya The letter ya takes a contextual form when it combines with vowel sign e，vowel sign ai，vowel SIGN O，VOWEL SIGN AU：

$$
\begin{aligned}
& \text { yy } y u \quad<\text { YA, } \text {, VOWEL SIGN U> }
\end{aligned}
$$

$$
\begin{aligned}
& \text { at yai <t Ya, かे vowel SIGN AI> } \\
& \text { ass } y o<\text { Ya, e, VOWEL SIGN } \mathrm{O}>
\end{aligned}
$$

RA The letter ra takes a contextual form when it combines with all vowel signs，eg．：

$$
\begin{aligned}
& \text { 皿 } \mathrm{rai}<\boldsymbol{s}_{\mathrm{RA}} \text {, } \hat{\mathbf{n}}_{\text {vowel sign al }}>
\end{aligned}
$$

## 3．9 Consonant－Virama Ligatures

Sequences of＜consonant，virama＞are rendered by default using a visible virama．However，three combi－ nations are also represented using a special ligature，which is referred to here as a＂khanda＂form：

|  | combining virāma | khanda ligature |
| :---: | :---: | :---: |
| －${ }_{\text {ta }}+Q_{\text {virama }}$ | き | 3 |
| $5^{\text {Na }}+\mathrm{Q}^{\text {virama }}$ | 5 | 3 |
| ＊ma＋$Q_{2}$ virama | 8 | இ |

An analysis of the available manuscripts indicates that there is no semantic distinction between the visible virāma forms and the khanda ligatures．The two forms of $<$ TA，virama $>$ and $<$ na，virama $>$ are used alter－ nately in the same context．The khanda form of ta is used inconsistently and when it does occur，its use is functionally identical to $\varrho$ U +09 CE bengali letter khanda ta．The combination＜ma，virama＞occurs only as the khanda ligature in the available sources．

It is necessary to represent both the virāma and khanda forms because they occur simultaneously．More－ over，they must be distinguished for analytical purposes．For instance，in a pedagogical text on Bhaiksuki palaeography that describes the formation of the conjunct mpa，it is necessary to render＜mA，virama＞ using a visible virama，eg．the statement＂然 $m+p a \rightarrow$ 梦 $m p a$＂properly expresses the rule that a conjoining form of PA is written beneath the regular form of MA in order to produce the conjunct mpa，while the statement＂国 $m+1 \mathbf{v a \rightarrow} m p a$＂does not correctly do so．

Given that there are only three attested khanda forms，it is possible to encode each as independent characters． The limitation of this approach is that the possible discovery of other khanda forms would require the separate encoding of each as characters．Another option is to encode a combining character with virama－like behavior and properties，which would control the representation of khanda forms．Such a control character would allow for a generic way of representing both existing and other potential khanda forms；however，encoding such a character may increase the complexities of implementing support for the script in rendering engines．

As there is no known semantic distinction between the khanda forms and their visible virāma representations， the three ligatures are to be considered contextual variants and will not be represented in plain text．The display of khanda forms is to be controlled using smart font ligature features，such as those available in Graphite and OpenType．If a requirement to represent these khanda ligatures at the character level arises as a result of new information，then the matter may be discussed again at that time．

## 3．10 Consonant－Vowel Combinations

Several vowel signs are written using alternative forms when they combine with certain consonants．This is standard behavior for Bhaiksuki．

|  | Regular | Alternative |
| :---: | :---: | :---: |
| VOWEL SIGN AA | ${ }^{s}$ | e，1 |
| VOWEL SIGN U | 3 | $\%$ |
| VOWEL SIGN UU | 3 | ， |
| VOWEL SIGN E | － | ह， |

|  | Regular Alternative |
| :--- | :---: | :--- |
| VOWEL SIGN AI |  |
| VOWEL SIGN O |  |
| VOWEL SIGN AU |  |

These alternative forms are contextual variants. Their usage is to be managed in the font, which should substitute the appropriate alternative form of a vowel sign based upon the presence of the base consonant.

### 3.10.1 VOWEL SIGN AA

The vowel sign at has the regular shape ${ }^{\boldsymbol{3}}$ and the alternative shapes and 1 .
The regular form ${ }^{\boldsymbol{s}}$ consists of an arrow-head $\boldsymbol{w i t h}$ a small stroke $>$ extending from the bottom-right corner of the arrow. This form is used with KA, CA, CHA, JHA, DDA, DDHA, TA, DA, NA, PHA, BHA, RA, VA, HA and attaches to the right of the arrow of a letter:

When the sign occurs with GA, GHA, NGA, JA, TTA, TTHA, NNA, THA, DHA, BA, MA, YA, LA, SHA, SSA, SA letters with two arrow-heads or whose arrow-head is positioned to the right of the body - it is rendered as a small stroke that is appended to the bottom-right corner of the right-hand arrow of a letter:

| 25 gha |  |
| :---: | :---: |
| ${ }^{20}{ }_{\text {n }}^{\text {n }}$ a |  |
| 邻 $j \bar{a}$ |  |
| Os ${ }_{\text {thà }}$ |  |
| 3s ${ }_{n} \bar{a}$ |  |
| 日s thā | $<\boldsymbol{\sim}_{\text {tha }}{ }^{\boldsymbol{4}}$ vowel sign as ${ }^{\text {a }}$ |
| $0^{1} d h \bar{a}$ | $<\boldsymbol{\sim}$ dha, ${ }^{\text {s }}$ vowel sign as ${ }^{\text {c }}$ |
| ~ $p \bar{a}$ |  |
| * $b \bar{a}$ | < ba, ${ }^{\text {¢ }}$ vowel sign at ${ }^{\text {a }}$ |
| cos $y \bar{a}$ |  |
| ºla |  |
| $\cdots{ }_{\sim} \sim_{s}$ |  |
| sā | < SA, ${ }^{3}$ vowel sign as ${ }^{\text {P }}$ |

The sign takes the shape 1 when it occurs with $\boldsymbol{\sim}$ кнА，which has no arrow－head：
का $k h \bar{a}<\boldsymbol{\mathcal { A H }}$ ，${ }^{\boldsymbol{s}}$ VOWEL SIGN AA＞
With nya，the sign is written as a short vertical stroke י appended to the bottom of the letter＇s body：

$$
\mathfrak{A T} \tilde{a} \bar{a}<\boldsymbol{A} \text { NYA, S Vowel SIGN AA }>
$$

## 3．10．2 VOWEL SIGN I

The vowel sign i replaces the arrow－head of the letter with which it occurs：

$$
\begin{aligned}
& \text { sicsion Vowel sign I> } \\
& \text { Tr } \tilde{n i}<\boldsymbol{A} \text { NYA, 合 VOWEL SIGN I> }
\end{aligned}
$$

$$
\begin{aligned}
& \boldsymbol{今}_{t i}<\boldsymbol{s} \text { TA, é VOWEL SIGN I> }
\end{aligned}
$$

With letters that have two arrow－heads，the vowel SIGN I is written in place of the right－hand arrow－head：

$$
\begin{aligned}
& \boldsymbol{\sigma}_{m i}<\boldsymbol{s}_{\text {ma }} \text {, vowel sign I> } \\
& 4 \cos _{\mathrm{YA}}^{\mathrm{y}} \mathrm{e} \text {, VOWEL SIGN I> }
\end{aligned}
$$

In the case of кна，which has no arrow head，the sign attaches to the upper right side of the letter：

When vowel sign i occurs in a conjunct in which RA is the initial consonant（repha），the sign is written in place of the repha：

## 3．10．3 vowel sign iI

The vowel sign ii behaves analogically to－vowel Sign i in that it replaces the arrow－head of the letter with which it occurs：

| 今 $k$ |  |
| :---: | :---: |
| f | $<\boldsymbol{A}$ nya， ，vowel sign |
| $0^{0}{ }_{d h i ̄}$ | $<$ |
|  |  |
| 会 $p \bar{\imath}$ | ＜$\sim_{\text {PA }} \hat{-}_{\text {－}}^{\text {Vowel SIGN II＞}}$ |
| $\overbrace{\text { ®in }}$ |  |

With letters that have two arrow－heads，the vowel SIGN it is written in place of the right－hand arrow－head：

In the case of кНА，which has no arrow head，the sign attaches to the upper－right side of the letter：

## 3．10．4 VOWEL SIGN U

The vowel sign $u$ is written beneath a letter．It has the regular form $\mathcal{B}$ and the alternative form．The regular form occurs with all consonants except for $\mathrm{KA}, \mathrm{GA}, \mathrm{TA}, \mathrm{BHA}, \mathrm{SHA}, \mathrm{RA}:$

$$
\begin{aligned}
& \text { 今 } c u<\boldsymbol{\delta} \text { Ca, }, \mathfrak{j} \text { vowel sign u> }
\end{aligned}
$$

$$
\begin{aligned}
& \text { Sु } y u<\text { YA, } \rho \text { Vowel sign U> }
\end{aligned}
$$

The alternative shape occurs with KA，GA，TA，BHA，SHA：

$$
\begin{aligned}
& \text { 全 } k u \text { < KA, S Vowel SIGN U> } \\
& \boldsymbol{z} g u<\boldsymbol{s} \text { GA, } \boldsymbol{\rho} \text { vowel sign U }> \\
& \text { 金 } t u \quad<\hat{\text { TA }} \text { TA, S VOWEL SIGN U }> \\
& \text { 金 } b h u<\text { BHA, } \text {, VOWEL SIGN U }>
\end{aligned}
$$

It takes the same shape with non－initial RA：

```
[5dru < DA, VIRAMA, \(\leqslant\) RA, Э VOWEL SIGN U \(>\)
```

However，when the sign occurs with an independent RA the combination is rendered as a ligature：

$$
\text { 今 } r u<\boldsymbol{N} \text { RA, } \text {, VOWEL SIGN U }>
$$

## 3．10．5 VOWEL SIGN UU

The vowel sign uv is written beneath a consonant letter．It has the regular form $J$ and the alternative form 3．The regular form occurs with all consonants except for KA，GA，TA，BHA，SHA，RA：

The alternative form，occurs with KA，GA，TA，BHA，SHA：

$$
\begin{aligned}
& \text { 务 } k \bar{u}<\text { 式 KA, g VOWEL SIGN UU> } \\
& \boldsymbol{\xi}^{4} g \bar{u}<\boldsymbol{G A} \text {, } \boldsymbol{\jmath} \text { VOWEL SIGN UU }> \\
& \boldsymbol{f} t \bar{u}<\boldsymbol{s} \text { TA, } \boldsymbol{j} \text { VOWEL SIGN UU }> \\
& \text { 务 } b h \bar{u}<\text { BHA, VOWEL SIGN UU }>
\end{aligned}
$$

It takes the same shape with non－initial RA：

However，when the sign occurs with an independent RA the combination is written as a special ligature：

$$
\text { a } r \bar{u}<\boldsymbol{\sim} \text { RA, } \overline{\boldsymbol{j}} \text { VOWEL SIGN UU }>
$$

## 3．10．6 VOWEL SIGN VOCALIC $R$

The vowel sign vocalic R is written as an extension of the final downward stroke of the letter with which it occurs：

The combination of a consonant with vowel sign vocalic r is clearly differentiated from a conjunct in－ volving RA in non－initial position：

$$
\begin{aligned}
& \text { - } \\
& \hat{E}_{t r}<\boldsymbol{t} \text { ta, } \boldsymbol{G}^{2} \text { vowel sign vocalic r> }
\end{aligned}
$$

$$
\begin{aligned}
& \text { (3) } s_{s}<\text { Sa, } G \text { vowel sign vocalic r> }
\end{aligned}
$$

## 3．10．7 VOWEL SIGN VOCALIC RR

The vowel sign vocalic rr is written by adding another stroke beneath vowel sign vocalic r：

$$
\begin{aligned}
& \text { 《 } \mathrm{kg}_{\bar{g}}<\mathbf{3} \text { ka, U vowel sign vocalic rr> }
\end{aligned}
$$

$$
\begin{aligned}
& \text { 《 } n \bar{\delta}<\boldsymbol{3} \text { Na, U vowel sign vocalic rr> }
\end{aligned}
$$

## 3．10．8 VOWEL SIGN VOCALIC $L$

The 8 vowel sign vocalic l attaches below the letter：

## 3．10．9 VOWEL SIGN E

The vowel sign e has the regular shape $\widehat{\wedge}$ and the alternative forms $\widehat{\vee}$ and
The regular form occurs with KA，GHA，CA，CHA，JA，JHA，DDA，DDHA，TA，DA，NA，PA，PHA，BA，BHA，MA， YA，RA，LA，VA，SSA，SA，HA．With letters in this set that have a single arrow－head，the arrow－head is shifted to the right，and the sign attaches to the top of the letter：

$$
\begin{aligned}
& \text { か } c e<\boldsymbol{s}_{\mathrm{CA}} \text {, - Vowel SIGN E> }
\end{aligned}
$$

| 3 che | < $\boldsymbol{\phi}_{\text {cha }}$ - vowel signe> |
| :---: | :---: |
| * dhe | < DDHA, - vowel SIGNe> |
| Fte | $<\boldsymbol{S}_{\text {TA, }}$ - Vowel Sign E> |
| $\boldsymbol{z}$ de | < $\mathbf{z}_{\text {DA, }}$ 亿 VowEl SIGN E> |
| $\checkmark_{\text {ne }}$ | $<\mathbf{S}_{\text {NA, }}$ - Vowel sign E> |
| ${ }^{*}$ bhe |  |
| (6) $r$ e | $<\boldsymbol{*}_{\text {RA, }}$ l Vowel Sign e |
| $\sim_{l e}$ | $<\boldsymbol{c}_{\text {LA, }}$ - Vowel sign e> |
| 令 $h$ | $<\boldsymbol{\sim}_{\text {HA }}$ - Vowel |

For letters with two arrow-heads, the sign is written in place of the left arrow-head:

When it occurs with GA, NGA, NYA, TTA, TTHA, NNA, THA, DHA, SHA - in which the arrow-head is placed to the right of the letter body - it is written using the alternative form $\hat{\mathbf{l}}$, which attaches to the arrow-head:

With KHA, which has no arrow-head, the sign is written as a stroke that attaches to the top of the letter:

$$
\boldsymbol{\beta}^{2} \text { khe }<\boldsymbol{\boldsymbol { s }} \text { кна, } \hat{\text { Vowel SIGN E }} \text { > }
$$

## 3．10．10 VOWEL SIGN AI

The vowel sign ai has the regular shape $\widehat{\imath}$ and the alternative forms $\stackrel{\rightharpoonup}{ }$ and
The regular form consists of two parts and is a composite of the regular and primary alternative forms of vowel sign e．Its behavior is analogous to that of vowel sign e：the arrow－head is shifted to the right， the top part ${ }^{\sim}$ of the sign attaches to the top of the letter，and the right－hand stroke ${ }^{\mathbf{\sim}}$ attaches to the top of the arrow－head．The regular form occurs with KA，GHA，CA，CHA，JA，JHA，DDA，DDHA，TA，DA，NA，PA，PHA， BA，BHA，MA，YA，RA，LA，VA，SSA，SA，HA．

$$
\begin{aligned}
& \text { 隠 } \mathrm{kai} \text { KA, かे vowel SIGN AI> } \\
& \text { \& cai }<\boldsymbol{\delta}_{\mathrm{CA}} \text { रें vowel sign al> }
\end{aligned}
$$

$$
\begin{aligned}
& \text { 令 nai < } \boldsymbol{\zeta}_{\mathrm{NA}, ~ \hat{~}} \text { vowel SIGN AI> }
\end{aligned}
$$

$$
\begin{aligned}
& \text { 备 hai }<\text { HA, 仓े vowel SIGN AI> }
\end{aligned}
$$

For letters in the group that have two arrow－heads，the top part $\curvearrowright$ replaces the left arrow－head，while the right－hand stroke 1 attaches to the top of the right－hand arrow－head：

$$
\begin{aligned}
& \text { of pai < PA, रे vowel SIGN AI> } \\
& \text { at } \text { sai <s SA, へी vowel SIGN Al> }
\end{aligned}
$$

When the sign occurs with GA，NGA，NYA，TTA，TTHA，NNA，THA，DHA，SHA－whose arrow－head lies to the right of the body－it is written as and attaches to the arrow－head：

$$
\begin{aligned}
& \text { fil nai }<\text { NNA, } \widehat{3} \text { vowel SIGN AI> }
\end{aligned}
$$

With the letter KHA，which does not have an arrow－head，the vowel sign ai is written as a loop attached to the top of the letter：

$$
\boldsymbol{\mathcal { S }}_{\text {khai }}^{<\boldsymbol{s} \text { KHA, }} \text { vowel SIGN AI> }
$$

## 3．10．11 VOWEL SIGN O

The regular form $\boldsymbol{\rightharpoonup}$ is a combination of vowel sign e and the contextual form of vowel sign aA. It occurs with KA, GHA, CA, CHA, JA, JHA, DDHA, TA, DA, PA, PHA, BA, BHA, MA, YA, LA, VA, SSA, SA, HA. For letters in this set that have one arrow-head, the vowel sign behaves analogous to vowel SIGN E: the arrow-head of the letter is shifted to the right, the top part $\sim$ of the sign attaches to the top of the letter, and the stroke $\boldsymbol{>}$ is attached to the bottom-right of the arrow head.

For letters in this set with two arrow-heads, the top part $\sim$ of the sign replaces the left arrow-head of the consonant and the stroke $\boldsymbol{>}$ attaches to the bottom right of the right-hand arrow-head.

When $\curvearrowright \perp$ vowel sign o occurs with dDa, NA, RA, its form is slightly modified such that the stroke $>$ is elongated vertically as $\mathbf{1}$. The arrow-head is shifted to the right, the top part of the sign attaches to the top of the letter and the stroke $\boldsymbol{י}$ attaches beneath the arrow:

$$
\begin{aligned}
& \text { 父 } d o<\text { DDA, } \quad \text { vowel SIGN O> }
\end{aligned}
$$

When the sign occurs with GA, NGA, NYA, TTA, TTHA, NNA, THA, DHA, SHA - whose arrow-head is to the right of the body - it is written as $\stackrel{\curvearrowright}{\circ}$. With these letters, the top part $\stackrel{\sim}{\sim}$ of vowel SIGN o is written as . The stroke $\stackrel{\rightharpoonup}{ }$ attaches to the bottom-right of the arrow.

$$
\begin{aligned}
& \text { (rit no < } \\
& \text { - }
\end{aligned}
$$

| $\delta_{\text {St }}^{\text {tho }}$ |  |
| :---: | :---: |
| 95 no | $<\boldsymbol{\beta}^{\text {nNa，}}$－vowel sign o＞ |
| \％tho | $\left\langle\boldsymbol{*}_{\text {tha，}} \boldsymbol{\nu}^{\text {vowel sign o＞}}\right.$ |
| お碞 | ＜${ }_{\text {dha，}}$－vowel sign o＞ |
| 羚 so | ＜$\sim_{\text {sha }}$－vowel sign |

With NYA，the vertical stroke י extending beneath the arrow－head is truncated and moved to below the body of the letter and is replaced with the stroke ${ }^{2}$ ，which attaches to the bottom－right of the arrow－head：
为 ño < NYA, ひ, VOWEL SIGN O>

When the sign occurs with KHA it is written as \％，which is based upon the forms of vowel SIGN E and vowel sign an used with the letter．The form is a variation of $\stackrel{\rightharpoonup}{2}^{2}$ in which the stroke $\boldsymbol{s}$ is elongated as $\mathbf{1}$ ：

$$
\text { F } k h o<\boldsymbol{\delta} \text { KHA, ↔」 VOWEL SIGN O> }
$$

## 3．10．12 VOWEL SIGN AU

The regular form $\widehat{\mathbf{2}}$ is a combination of AA．This form occurs with KA，GHA，CA，CHA，JA，JHA，DDHA，TA，DA，PA，PHA，BA，BHA，MA，YA，LA，VA，SSA， SA，HA．For letters in this set that have one arrow－head，the vowel sign behaves analogous to vowel sign AI：the arrow－head of the letter is shifted to the right，the top part $\leadsto$ of the sign attaches to the top of the letter，the stroke $\mathbf{}^{\mathbf{~}}$ attaches to the top of the arrow－head，and the stroke $\boldsymbol{\sim}$ attaches to the bottom－right of the arrow head．

$$
\begin{aligned}
& \text { \& } c a u<\hat{c A} \text {, คे VOWEL SIGN AU }> \\
& \text { ふ } \\
& \text { ふ } d a u<\text { DA, 仓े Vowel SIGN AU }> \\
& \text { दे bhau < BHA, 乌े vowEl SIGN AU> } \\
& \text { คlau < LA, چे VowEL SIGN AU> }
\end{aligned}
$$

For letters in this set with two arrow－heads，the top part $\boldsymbol{\sim}$ of the sign replaces the left arrow－head，the $\sim$ attaches to the top of the right arrow－head，and the stroke $>$ attaches to the bottom right of the right－hand arrow－head．

$$
\begin{aligned}
& \text { dy yau < YA, 个े vowel SIGN AU }>
\end{aligned}
$$

When $\hat{\mathbf{*}}$ vowel sign au occurs with DDA, NA, RA, its form is slightly modified such that the stroke $\boldsymbol{>}$ is elongated vertically as $\mathbf{1}$. The arrow-head is shifted to the right, the top part of the sign attaches to the top of the letter, the right-hand stroke attaches to the top of the arrow, and the stroke $\mathbf{י}$ attaches beneath the arrow:

$$
\hat{3} \text { nau }<\boldsymbol{3} \mathrm{NA}, \widehat{\mathbf{~}} \text { vowel SIGN AU }>
$$

The vowel sign au takes the alternative shape? when it is written with GA, NGA, NYA, TTA, TTHA, NNA, THA, DHA, SHA. The top part ${ }^{\curvearrowright}$ is a left-ward curving extension of the corresponding alternative form of vowel sign o used with these letters.

The combination of NYA with vowel sign au is not attested; however, the sign would take the shape ? with this letter, analogous to the form of vowel sign o used with it.

Additionally, although the combination is not attested, when vowel sign au occurs with кнА, the expected form would be ₹ , which is patterned upon the form \% vowel sign o used with кна:

### 3.11 Consonant Conjuncts

Consonant clusters are written as conjuncts, which are generally rendered as vertically stacked ligatures, with non-initial consonants joined sequentially beneath the initial letter. In some cases, conjuncts may be rendered as independent ligatures. The encoded representation for conjuncts is

$$
<\text { consonant, } \text { VIRAMA, }[\text { consonant, } \Omega \text { VIRAMA, }]^{*} \text { consonant }>
$$

Generally, the arrow-heads of non-initial consonants are removed when they are subjoined, eg. see $c c a$, tta, $d d a$ below. In some cases, however, the consonant retains its arrow-head, eg. see niga, ñsa, jña, sṭa below. Examples of conjuncts are:

### 3.11.1 Contextual forms of consonants in conjuncts

Several letters take special forms when they occur in conjuncts:
KA When initial, $\mathbf{A A}^{\boldsymbol{K}}$ is slightly modified to $\boldsymbol{*}$ :

PA The letter PA takes the contextual form when non-initial in a cluster:

RA When cluster initial, $\boldsymbol{\tau}_{\text {ra }}$ is written as an arrow-head $\stackrel{\rightharpoonup}{*}$ repha above the following consonant in the cluster:

When repha occurs with a letter that has two arrow-heads, eg. SA, ya, etc., it is attached to the right-hand arrow-head:
rya<s RA, , VIRAMA,

When ra occurs in the final position in a cluster it is written using the subjoined form (note the differentiation from vowel sign vocalic r):

$$
\begin{aligned}
& \text { Estron TA, VOWEL SIGN VOCALIC R> }
\end{aligned}
$$

When $\boldsymbol{G}$ vowel sign vocalic r occurs with Ra, the latter is written as repha and placed above the arrowhead of the vowel letter:

$$
\mathcal{F}_{r r}<\boldsymbol{*} \text { RA, } \text {, Vowel sign vocalic } \mathrm{R}>
$$

YA When in conjunct final position, ya is written as the subjoined form

### 3.11.2 Conjuncts and Vowel Signs

Above-base and spacing signs attach to the glyph of the initial consonant, while below-base signs attach to the glyph of the final consonant:

```
た \(k t u<\) KA,
```

The shaping of vowel signs is dependent upon the letter to which they attach (see section 3.10).

### 3.12 Various Signs

Candrabindu The $\stackrel{\bullet}{\bullet}$ SIGN CANDRABINDU is used for nasalization. The variant form $\stackrel{\bullet}{\bullet}$ is written with a dot instead of a ring. This form is a glyphic variant and is semantically identical to the regular form.

Anusvara The $\dot{\bullet}$ SIGN ANUSVARA is used for nasalization. It has the variant form $\stackrel{\bullet}{\circ}$, written as a dot instead of as a ring. The dotted form is a glyphic variant and is semantically identical to the regular form.

Visarga The e SIGN vISARGA represents post-vocalic aspiration (/h/) in Sanskrit.

Avagraha The 5 SIGN AVAGRAHA marks the elision of word-initial $a$ in Sanskrit as a result of sandhi.

### 3.13 Punctuation

Daṇ̣ā-s The $\mathbf{I}$ DANDA and $\mathbf{I I}$ DOUble danda are marks of general punctuation.

Word Separator The word separator is used for demarcating lexical boundaries. It is written at the head-height. It also appears as a ${ }^{\bullet}$ dot instead of a vertical bar.

### 3.14 Gap Fillers

The GAP FILLER-I and $\hat{\imath}$ GAP FILLER-2 are used as spacing or completion marks, especially for justifying a text block both at the end of the line before the binding area of the palm-leaf, as well as at the absolute end of a line. In other cases, the marks are used for indicating a gap after a deletion or to indicate a lacuna. In some cases, $\boldsymbol{\bullet}$ GAP FILLER-2 is used as mark of deletion and is written over the text to be erased.

The GAP FILLER-I consists of three short diagonal lines written one above the other. It may also appear as three dots written vertically when the diagonal lines are rendered so short that they appear as dots. The $\hat{\boldsymbol{E}}$ GAP FILLER-2 consists of a middle dot enclosed vertically by an upward and downward pointing arrow.

### 3.15 Digits

There is a set of decimal digits (sometimes referred to as "figure-numerals" in the scholarly literature): 0

The digits one, TWO, FOUR .. NINE occur in the available manuscripts, while ZERO and THREE do not. Despite the lack of evidence of zero and three, it is clear that the attested eight digits are part of a complete decimal system, which corresponds to sets of digits in related scripts. Based upon this rationale, provisional glyphs have been assigned for Bhaiksuki ZERO and THREE. From a palaeographical perspective, the forms of

ZERO and THREE are extremely conservative and uniform and are well-attested in other scripts used contemporaneously with Bhaiksuki (cf. Bendall (1883), eg. Cambridge MSS Add. 1645 and 1683, shown here in figure 35). The glyphs for ZERO and THREE proposed here are based upon the corresponding digits attested in these two Buddhist Sanskrit manuscripts kept at the Cambridge University Library. It is likely that these glyphs accurately represent the forms of these digits in the Bhaiksuki script. If distinctive forms for zero and three are identified in manuscripts written in Bhaiksuki, then the provisional glyphs may be replaced with the attested forms at that time.

The inclusion of provisional glyphs for zero and three also serves a practical technical purpose. Currently, the Unicode general category ' Nd ' (Number, digit) is assigned only to characters that belong to a complete set of ten digits. If a decimal set is incomplete the general category 'No' (Number, other) is assigned to the digits. Although it is clear that the Bhaiksuki digits belong to a complete set of ten digits, the absence of zERO and THREE will require that the general category for ONE, TWO, FOUR .. NINE be assigned 'No' instead of ' Nd '. If ZERO and THREE are identified in the future, their inclusion in the block will require a change of the general category from 'No' to 'Nd' for the existing digits. Encoding a full set of Bhaiksuki digits with provisional glyphs for ZERO and THREE is, therefore, a practical solution.

### 3.16 Numbers

There is a positional number system used in addition to digits. It contains numbers (referred to as 'letternumerals' in the scholarly literature) for the primary and tens units and a unit mark for representing the hundreds:

The system theoretically provides for the writing of numbers in the range $1-9,999$. However, numbers beyond 264 are not attested in the available manuscripts (see figure 34 for examples in addition to those provided below).

Bhaiksuki numbers are written vertically with each unit occupying a separate line, such that the largest unit is written first and smaller units descend in order beneath the larger unit. For instance, the number 11 is expressed by stacking $\boldsymbol{\jmath}$ number one beneath $\boldsymbol{\varnothing}$ number ten, 12 by placing $\mathbf{3}$ number two beneath $\mathscr{\square}$ number ten, etc. This pattern applies to the numbers 10-99. Shown below are the numbers 10-19:

The hundreds are expressed as a linear pair of the $\boldsymbol{\beta}_{\boldsymbol{s}}$ hundreds unit mark and a primary number（ $\boldsymbol{\rho}$ nUmber one ．．（®）nUmber nine），which represents the magnitude of the order．The pair is written upon the same line，eg． are the numbers $110-119$ ：

The control of vertical orientation is currently beyond the scope of character encoding and is to be managed in the font．For this reason，although the expected layout of Bhaiksuki numbers is vertical top to bottom，it is expected that the default will be horizontal left to right．Below are examples of encoded representations of Bhaiksuki numbers：

| Expected | Default |  |  |
| :---: | :---: | :---: | :---: |
| 苓） | （3） | 100 | ＜${ }_{\text {人 }}$ Hundreds unit mark， 1 number one＞ |
|  | 会つ3 | 101 | hundreds unit mark， $\boldsymbol{1}$ number one， 3 number one $>$ |
| $\begin{aligned} & \text { 4\% } \\ & \text { 是 } \\ & 3 \end{aligned}$ | はつす3 | 111 | hundreds unit mark， 1 number one， （）number ten， 1 number one＞ |

The default，or horizontal，orientation might not be desired，but it is，nonetheless，semantically valid and unambiguous as each unit occupies a separate line．For achieving proper vertical orientation the rendering engine should first consider any sequence of sund hunded Unit mark and a following number as a pair and should retain both characters on the same line．Every number that follows should be displayed upon a separate line．Given the nature of the system，the maximum number of characters in a semantically－valid sequence is 4 characters，as exemplified in the sequence for 111 shown above．

## 3．17 Editorial marks

Editorial marks，such as the insertion marks ${ }_{\wedge}^{\wedge}$ and ${ }^{*}{ }^{+}$，are used commonly in Bhaiksuki manuscripts．These are presently not proposed for encoding．The deletion and insertion marks resemble editorial marks used in other Indic scripts．It may be practical to unify these characters in a separate block of pan－Indic and generic editorial marks．

## 3．18 Ornaments

In the Bhaiksuki manuscript shown recently in a Chinese documentary two elaborately ornamented cakra－s in different colors are visible．These may be classified as proper ornaments．However，analysis of these ornaments requires access to the newly revealed manuscript．In the manuscript of the Manicūdajätaka the
sign © (3) is used in one instance apparently as an ornamental device. It is graphically identical to © $\sqrt{\circ}$ NUMBER nine. Until additional information is available, this sign is to be represented using number nine.

### 3.19 Collation

The primary collating order for Bhaiksuki is as follows:

$$
\begin{aligned}
& \boldsymbol{\sigma}_{\mathrm{TA}}<\boldsymbol{\theta}_{\mathrm{THA}}<\boldsymbol{2}_{\mathrm{DA}}<\boldsymbol{\theta}_{\mathrm{DHA}}<\boldsymbol{\xi}_{\mathrm{NA}}<\boldsymbol{v}_{\mathrm{PA}}<\boldsymbol{\omega}_{\mathrm{PHA}}<\mathrm{B}_{\mathrm{BA}}<
\end{aligned}
$$

$$
\begin{aligned}
& \text { § SIGN U }<\text { SIGN UU }<\text { SIGN VOCALIC } R<G \text { SIGN VOCALIC RR }<
\end{aligned}
$$

$$
\begin{aligned}
& \text { - VIrama }
\end{aligned}
$$

The following characters have secondary weights:

## 4 Character Data

### 4.1 Character Properties

The properties for Bhaiksuki characters in the Unicode Character Database format are:

```
11C00;BHAIKSUKI LETTER A;LO;0;L;;;;;N;;;;;
11C01;BHAIKSUKI LETTER AA;LO;0;L;;;;;N;;;;;

11C6C;BHAIKSUKI HUNDREDS UNIT MARK;NO;0;L;;;;100;N;;;;;
```

### 4.2 Linebreaking

Linebreaking properties of Bhaiksuki characters given in the data format of LineBreak.txt:

```
11C00..11C08; AL # LETTER A .. LETTER VOCALIC L
11C0A..11C2E; AL # LETTER E .. LETTER HA
11C2F..11C36; CM # VOWEL SIGN AA .. VOWEL SIGN VOCALIC L
11C38..11C3F; CM # VOWEL SIGN E .. VIRAMA
11C40; AL # SIGN AVAGRAHA
11C41..11C45; BA # DANDA .. GAP FILLER-2
11C50..11C59; NU # DIGIT ZERO .. DIGIT NINE
11C5A..11C6C; AL # NUMBER ONE .. HUNDREDS UNIT MARK
```

## 4.3 'Confusable’ Characters

Some Bhaiksuki characters resemble those found in other scripts encoded in the UCS:

```
11C14 BHAIKSUKI LETTER CHA ; }11197\mathrm{ SHARADA LETTER CHA
11C19 BHAIKSUKI LETTER TTHA ; 1119C SHARADA LETTER TTHA
11C3E BHAIKSUKI SIGN VISARGA ; 0983 BENGALI SIGN VISARGA
11C41 BHAIKSUKI DANDA ; 0964 DEVANAGARI DANDA
11C42 BHAIKSUKI DOUBLE DANDA ; 0965 DEVANAGARI DOUBLE DANDA
11C50 BHAIKSUKI DIGIT ZERO ; 0966 DEVANAGARI DIGIT ZERO
11C57 BHAIKSUKI DIGIT SEVEN ; O9ED BENGALI DIGIT SEVEN
```

There are also letters, consonant-vowel combinations, and conjuncts within the script that resemble each other and may be 'confusable'. Detailed comparisons of such resemblances is given in figures 32 and 33 . The most apparent is the following:

```
11C19 BHAIKSUKI LETTER TTHA ; 11C20 BHAIKSUKI LETTER DHA
```

### 4.4 Syllabic Categories

Syllabic categories given in the data format of IndicSyllabicCategory.txt:

```
# Indic_Syllabic_Category=Bindu
11C3C ; Bindu # Mn SIGN CANDRABINDU
11C3D ; Bindu # Mn SIGN ANUSVARA
# Indic_Syllabic_Category=Visarga
11C3E ; Visarga # Mc SIGN VISARGA
# Indic_Syllabic_Category=Virama
11C3F ; Virama # Mn SIGN VIRAMA
# Indic_Syllabic_Category=Vowel_Independent
11C00..11C0D ; Vowel Independent # Lo [14] LETTER A .. LETTER AU
# Indic_Syllabic_Category=Vowel_Dependent
11C2F ; Vowel_Dependent # Mc [3] VOWEL SIGN AA
11C30..11C36 ; Vowel_Dependent # Mn [8] VOWEL SIGN I .. VOWEL SIGN VOCALIC L
11C38..11C3B ; Vowel_Dependent # Mc [2] vOWEL SIGN E .. VOWEL SIGN AU
# Indic_Syllabic_Category=Consonant
11C0E..11C2E ; Consonant # Lo [34] LETTER KA .. LETTER HA
```

### 4.5 Matra Categories

Matra categories given in the data format of IndicMatraCategory.txt:

```
# Indic_Matra_Category=Right
11C2F - ; Right # Mc VOWEL SIGN AA
# Indic_Matra_Category=Top
11C30..11C31 ; Top # Mn [2] VOWEL SIGN I .. VOWEL SIGN II
# Indic_Matra_Category=Bottom
11C32..11C36 ; Bottom # Mn [5] VOWEL SIGN U .. VOWEL SIGN VOCALIC L
11C3F ; Bottom # Mn SIGN VIRAMA
# Indic_Matra_Category=Top_And_Right
11C38..11C3B ; Top_And_Right # Mc VOWEL SIGN E .. VOWEL SIGN AU
```

## 6 Acknowledgments

The authors would like to express their gratitude to Shriramana Sharma for discussions regarding the encoded representation of consonant-virama ligatures.

We also express our gratitude to Prof. Michael Witzel (Harvard University), editor of the Harvard Oriental Series, for granting permission to use figures from Dimitrov 2010 in this proposal. We are also grateful to Prof. Francesco Sferra (Naples) for his assistance.

Previous versions of this proposal were made possible in part by a grant from the United States National Endowment for the Humanities, which funded the Universal Scripts Project (part of the Script Encoding Initiative at the University of California, Berkeley). Any views, findings, conclusions or recommendations expressed in this publication do not necessarily reflect those of the National Endowment for the Humanities.

# ISOIIEC JTC 1/SC 2/WG 2 PROPOSAL SUMMARY FORM TO ACCOMPANY SUBMISSIONS FOR ADDITIONS TO THE REPERTOIRE OF ISOIIEC $10646{ }^{1}$ Please fill all the sections A, B and C below. 

Please read Principles and Procedures Document (P \& P) from http://www.dkuug.dk/JTC1/SC2/WG2/docs/principles.html for guidelines and details before filling this form.
Please ensure you are using the latest Form from http://www.dkuug.dk/JTC1/SC2/WG2/docs/summaryform.html. See also http://www.dkuug.dk/JTC1/SC2/WG2/docs/roadmaps.html for latest Roadmaps.
A. Administrative

1. Title: $\quad$........ Revised Proposal to Encode the Bhaiksuki Script in ISOIIEC 10646
2. Requester's name:

Script Encoding Initiative (SEI)
Anshuman Pandey (pandey@umich.edu)
Dragomir Dimitrov (dimitrov@staff.uni-marburg.de)
3. Requester type (Member body/Liaison/Individual contribution): Liaison contribution
4. Submission date:
5. Requester's reference (if applicable):
6. Choose one of the following:

This is a complete proposal:
Yes
(or) More information will be provided later:
B. Technical - General

1. Choose one of the following:
a. This proposal is for a new script (set of characters)

Proposed name of script:
Bhaiksuki
b. The proposal is for addition of character(s) to an existing block:

Name of the existing block:
2. Number of characters in proposal: $\qquad$
3. Proposed category (select one from below - see section 2.2 of $P \& P$ document):

A-Contemporary ..... B.1-Specialized (small collection)
C-Major extinct ..... D-Attested extinct

B.2-Specialized (large collection)

F-Archaic Hieroglyphic or Ideographic $\qquad$ G-Obscure or questionable usage symbols
--------
4. Is a repertoire including character names provided?

5. Fonts related:
a. Who will provide the appropriate computerized font to the Project Editor of 10646 for publishing the standard?

Anshuman Pandey
b. Identify the party granting a license for use of the font by the editors (include address, e-mail, ftp-site, etc.): Anshuman Pandey (pandey@umich.edu)
6. References:
a. Are references (to other character sets, dictionaries, descriptive texts etc.) provided? $\qquad$ Yes
b. Are published examples of use (such as samples from newspapers, magazines, or other sources) of proposed characters attached? Yes
7. Special encoding issues:

Does the proposal address other aspects of character data processing (if applicable) such as input, presentation, sorting, searching, indexing, transliteration etc. (if yes please enclose information)? ....Yes
8. Additional Information:

Submitters are invited to provide any additional information about Properties of the proposed Character(s) or Script that will assist in correct understanding of and correct linguistic processing of the proposed character(s) or script. Examples of such properties are: Casing information, Numeric information, Currency information, Display behaviour information such as line breaks, widths etc., Combining behaviour, Spacing behaviour, Directional behaviour, Default Collation behaviour, relevance in Mark Up contexts, Compatibility equivalence and other Unicode normalization related information. See the Unicode standard at http://www.unicode.org for such information on other scripts. Also see Unicode Character Database ( http://www.unicode.org/reports/tr44/) and associated Unicode Technical Reports for information needed for consideration by the Unicode Technical Committee for inclusion in the Unicode Standard.

[^0]
## C. Technical - Justification

1. Has this proposal for addition of character(s) been submitted before? If YES explain
2. Has contact been made to members of the user community (for example: National Body, user groups of the script or characters, other experts, etc.)?

If YES, with whom?
If YES, available relevant documents:
3. Information on the user community for the proposed characters (for example: size, demographics, information technology use, or publishing use) is included? Yes Reference:
4. The context of use for the proposed characters (type of use; common or rare) Rare Reference:
5. Are the proposed characters in current use by the user community? Yes If YES, where? Reference:
6. After giving due considerations to the principles in the P\&P document must the proposed characters be entirely in the BMP?

If YES, is a rationale provided?
If YES, reference:
7. Should the proposed characters be kept together in a contiguous range (rather than being scattered)? Yes
8. Can any of the proposed characters be considered a presentation form of an existing character or character sequence?
No
9. Can any of the proposed characters be encoded using a composed character sequence of either existing characters or other proposed characters?

If YES, is a rationale for its inclusion provided?
If YES, reference:
10. Can any of the proposed character(s) be considered to be similar (in appearance or function)
to, or could be confused with, an existing character?
No
If YES, is a rationale for its inclusion provided?
If YES, reference:
11. Does the proposal include use of combining characters and/or use of composite sequences? If YES, is a rationale for such use provided?

Is a list of composite sequences and their corresponding glyph images (graphic symbols) provided?
If YES, reference:
12. Does the proposal contain characters with any special properties such as control function or similar semantics? Yes

If YES, describe in detail (include attachment if necessary)
see text of the proposal
13. Does the proposal contain any Ideographic compatibility characters? No ....... No If YES, are the equivalent corresponding unified ideographic characters identified?

If YES, reference:
