

Title Editorial Correction KHMER
Source The Unicode Consortium and Ireland
Status Joint contribution
Action Request for an editorial correction

The attached file contains a page from the Unicode Standard, showing a corrected character chart for KHMER. The 8 characters from 17BE to 17C5 inclusive were shown with incorrect glyphs in the FDAM 25 as well as in ISO/IEC 10646-1:2000 and in the original printing of *The Unicode Standard, Version 3.0*. The correct glyphs are shown in the attached chart.

The Unicode Consortium and Ireland request that the corresponding corrections will be applied to table 47 of ISO/IEC 10646-1 by means of an editorial correction. The Unicode Consortium will supply the revised font needed for creating the corrected table 47.

Note: The corrections applied in the chart in this document restore missing glyph pieces to several characters as well as show the correct orientation of several combining characters with respect to the implied base character.

No other changes need to be applied to the text of ISO/IEC 10646-1 for this correction.

The corrections were submitted to Unicode by the Cambodian National Body.
