

# Irish comments on FPDAM 8 for ISO/IEC 10646:2003

Reference: SC2 N4078

Closes: 2010-03-25

Date: 2010-03-23

Ireland **disapproves** the draft with the technical and editorial comments given below. Acceptance of these comments and appropriate changes to the text will change our vote to approval.

**T1. Page 59, Row A72: Latin Extended-D.** Ireland reiterates its support for the character being balloted at A78F, LATIN LETTER MIDDLE DOT. Ireland opposes the removal of A78F LATIN LETTER MIDDLE DOT from FPDAM 8. However, in order to prevent confusion, we suggest that the name be changed to LATIN LETTER GLOTTAL DOT, which reflects its use as a phonetic letter in transcriptions of Tangut and Chinese.

**T2. Page 81, Row 1F30: Miscellaneous Pictographic Symbols.** Ireland requests that the block name be changed to **Miscellaneous Symbols and Pictographs**.

**T3. Page 83, Row 1F30: Miscellaneous Pictographic Symbols.** With reference to N3777, “KDDI Input on Emoji”, Ireland requests that the following characters be inserted into the block (pushing the rest of the characters in the column down by two:

1F536 MEDIUM RED CIRCLE  
1F537 MEDIUM BLUE CIRCLE

**T4. Page 92, Row 1F60: Emoticons.** With reference to L2/10-061R “Emoji: Review of FPDAM8”, and to earlier documents illustrating the glyphs and names used in the sources, Ireland requests a number of name changes, shown below in the formula OLD NAME > NEW NAME. The annotations to those characters are also given here; in a few cases where the annotation has changed or been added this is indicated. Naming conventions have been normalized for eye-shapes such as SQUINTING and CLOSED, and WINKING and TIGHTLY-CLOSED, reflecting some typical choices in the sources and in other emoticon implementations. The word HAPPY has not been used as in favour of the descriptive SMILING already in use in the UCS. A few of the faces have been given names descriptive of their “emotional comment”, but in cases where the interpretation seems unclear a more direct description of the glyph has been used; in these cases, we believe, annotations should be used if necessary. The FACE WITH STUCK-OUT TONGUE for instance, may indicate “kidding” in Japanese telephony, but this gesture means something quite different in Europe and North America. (We have tried to be inclusive and neutral.) In the chart at the end of the document we have given the balloted name as a character annotation to assist WG2 and the UTC in identifying the characters, but it is not proposed that these names be retained as aliases.

T5. **Page 92, Row 1F60: Emoticons.** Ireland requests a number of character additions. Most of these are “generic” forms of faces which are otherwise used in the source environment of Japanese telephony. For instance, there are three different grinning faces used (with eyes and eyebrows, with squinting eyes, and with squinting eyes and tears) but an ordinary grinning face is missing. In T6 below we propose to order the emoticons according to mouth shape, and so the generic mouth shapes are proposed here. Some other characters are proposed because of differences in cultural identity. For example, SLEEPY FACE is recognized in Japan (and perhaps elsewhere) by the “snot bubble”; this is completely unknown in the West (indeed the image has quite *different* connotations than the “cute sleepiness” known in Asia). On the other hand, the face with three zeds is very widely recognized, and is implemented in instant messaging emoticons, so SLEEPING FACE has been proposed for addition. (We do not care for the name SLEEPY FACE for the former, but doubt that FACE WITH SNOT BUBBLE would be more felicitous.) Another example would be WEARY FACE here, which correctly maps to a KDDI character; it differs from ANGUISHED FACE in terms of its eye-shape. The proposed additions are shown below in the chart in yellow-highlighted glyph cells.

1F64B FACE WITH OPEN MOUTH

1F64C HUSHED FACE

1F64D SLEEPING FACE

T6. **Page 92, Row 1F60: Emoticons.** Ireland requests that the following characters be re-arranged in the code chart. A number of the annotations have been changed. The characters have been ordered by mouth-shape, and within each mouth shape have been ordered by eye-shape. We have attempted to be accurate here and above; the chart at the end is what we intend.

E1. **Page 30, Row 1BC: Batak.** Ireland suggests that the glyphs for 1BFA and 1BFB be increased in size somewhat. Note that the size of the characters is not significant except in terms of palaeography. While the top three Batak examples below were taken from van der Tuuk in the 1860s, modern researchers do not require such presentation, and fonts which display the characters as in the fourth through seventh examples are equally as acceptable.

Note that the fifth and seventh examples below both use ordinary “drop-caps” styling, commonly found in word-processing and typesetting programs of various kinds—no special formatting beyond this is intended.
