## ISO/IEC JTC1/SC2/WG2 <br> Coded Character Set <br> Secretariat: Japan (JISC)

| Doc. Type: | Disposition of comments |
| :--- | :--- |
| Title: | Disposition of comments on SC2 N 4168 (ISO/IEC FCD $106463^{\text {rd }}$ <br> Technology - Universal Coded Character Set (UCS)) Information |
| Source: | Michel Suignard (project editor) |
| Project: | JTC1 02.10646.00.00.00.03 |
| Status: | For review by WG2 |
| Date: $\quad 2011-06-06$ |  |
| Distribution: WG2 |  |
| Reference: | SC2 N4168, N4181, WG2 N4023 |
| Medium: | Paper, PDF file |

Comments were received from Armenia, Egypt, Germany, Ireland, Japan, Korea (ROK), U.K, and U.S.A. The following document is the draft disposition of those comments. The disposition is organized per country.

Note - The full content of the ballot comments have been included in this document to facilitate the reading. The dispositions are inserted in between these comments and are marked in Underlined Bold Serif text, with explanatory text in italicized serif.

As a result of these dispositions, Japan, Korea (ROK), and the USA changed their vote to positive. This only leaves one negative vote (Ireland).

## Armenia (comment not related to a vote)

## Technical comments

## T1. Currency symbols

It is clear idea to combine all the signs, including the monetary one, in one and the same national block, however it is preferable to place Armenian Dram Symbol into Currency Symbols table. Armenian Dram symbol has two horizontal strokes like the majority of the symbols in that table, and those symbols are grouped there together on the basis of functionality and symbolism.

## Noted

$\overline{T h e ~ p r e f e r e n c e ~ f o r ~ m o v i n g ~ t h e ~ A r m e n i a n ~ D r a m ~ s y m b o l ~ i s ~ n o t e d . ~ H o w e v e r ~ a ~ s i m i l a r ~ a r g u m e n t ~ w a s ~ m a d e ~ b y ~}$ Armenia in the previous phase and it was not accepted. The rationale was given in the following disposition which still applies (extract from document WG2 N3936, page 2, disposition of comment T1.a) from Armenia):
<
There is no strict rule concerning the placement of currency symbols in the standard. At this point, many currency symbols are not encoded in the Currency Symbols block, but instead in their script block (for example THAI CURRENCY SYMBOL BAHT in OBF9, GUJARATI RUPEE SIGN in OAF1) or in other block. The table 15.1 in the Unicode Standard (section 15.1) shows these locations. The Currency block tends to be reserved for symbols that are used across multiple script contexts and have no style dependencies with their own script. The script blocks are used when the currency has a close relationship with a letter form in their related script block. This is clearly the case here with the letter form being 0534 ARMENIAN CAPITAL LETTER DA. Based on this, the location stays unchanged.
>>

## Egypt: Positive with comments

## Technical comments

## T1. Arabic character names

The existing Arabic character name used for these letters are not the classical naming, please change to the proposed writing, which will facilitate the understanding for this character by all Arabic speaking users:

- replace all $(\mathrm{BEH})$ with $\left(\mathrm{BA}^{\prime}\right)$
- replace all (TEH) with ( $\mathrm{TA}^{\prime}$ )
- replace all (THEH) with (THA' )
- replace all (HAH) with (HA' )
- replace all (KHAH) with (KHA' )
- replace all (REH) with (RA' )
- replace all (ZAIN) with (ZAY )
- replace all (ZAH) with (DHA' )
- replace all (FEH) with (FA' )
- replace all (HEH) with (HA )
- replace all (YEH) with (YA' )
- replace (WASLA) with (WASL)

## Not accepted

This comment is almost verbatim the same that was done for the CD ballot and was not accepted. The disposition from the CD ballot (document WG2 N3936, page 3) is provided with slight editorial fixes to take into account what was actually done in the FCD text:

## \ll

There are several reasons to not accept this request:

1) The current names have been in use for a long time in ISO/IEC character standards, not only in ISO/IEC 10646, but also ISO/IEC 8859-6 and others.
2) Per sub-clause 24.2 the character names cannot include an apostrophe.
3) Per clause 7 , the character names cannot be changed.

A short note has been added in the Arabic block (0600-06FF) for Arabic letters based on ISO 8859-6:
Arabic letter names follow romanization conventions derived from ISO 8859-6. These differ from the Literary Arabic pronunciation of the letter names. For example, U+0628 ARABIC LETTER BEH has a Literary Arabic pronunciation of ba'.
>>

## Germany: Positive with comments

## Technical comments

## T1. ARABIC LETTER REH WITH LOOP

The name of the proposed character U+08AA RABIC LETTER REH WITH LOOP obviously is mistyped (at the beginning, an "A" is missing).
Proposed change by Germany
U+08AA ARABIC LETTER REH WITH LOOP
Withdrawn
The typo was present in preliminary charts, but the FCD document is correct.

## T2. BATAK SYMBOLS

The following proposed characters:
1BFA BATAK SYMBOL BINDU GODANG
1BFB BAKAK SYMBOL PINARJOLMA
are part of the Batak script, and necessary to represent Batak texts in a typographically appropriate way
Proposed change by Germany
Germany opposes to requests to remove these characters from the FCD, if such are raised.
Noted
See disposition of comment $T 2$ from US.

## T3. RAISED SYMBOLS (2E33-2E34)

The names of the following proposed characters:

## U+2E33 RAISED DOT

U+2E34 RAISED COMMA
which are to be displayed slightly above of the baseline, are misleading, as the term "raised" in the names of
Unicode characters until now denotes a position above the x-height line, as for:
U+18DF CANADIAN SYLLABICS FINAL RAISED DOT
U+2E0C LEFT RAISED OMISSION BRACKET
For more details, see document JTC1/SC2/WG2 N3984
Proposed change by Germany
Germany requests not to introduce unnecessary arbitrarity and inconsistency into Unicode character naming.
Germany suggests the following names for the proposed characters:
U+2E33 LIFTED DOT
U+2E34 LIFTED COMMA
For more details, see document JTC1/SC2/WG2 N3984.

## Accepted in principle

An annotation will be added to the first character (2E33RAISED DOT) as follows:

* glyph position between positions used for 002E full stop and 00B7 middle dot.

This covers in principle the next character (2E34 RAISED COMMA) as well.
T4. LATIN LETTER GLOTTAL DOT (2E33-2E34)
The following proposed character:
U+A78F LATIN LETTER GLOTTAL DOT
Page 3 of 16
is required for the applications shown in document JTC1/SC2/WG2 N3567.
More applications are shown in document JTC1/SC2/WG2 N3984.
Also, it is typographically distinct from U+00B7 MIDDLE DOT.
For more details, see document JTC1/SC2/WG2 N3984.
Proposed change by Germany
Germany strongly opposes to requests to remove this character from the FCD, if such are raised.
Germany suggests the name and annotations to be changed to:
U+A78F LATIN LETTER ELEVATED DOT
$=\quad$ turned full stop (referring to metal type)

- usually displayed at x-height
- used as glottal dot in transliteration for Phags-Pa and phonetic transcription for Tangut

For more details, see document JTC1/SC2/WG2 N3984.

## Noted

See disposition of comment T1 from US.

## T5. Addition to collection 288 MULTILINGUAL LATIN SUBSET

The following proposed character:
U+2E3A TWO-EM DASH
was accepted after the German request which yielded the inclusion of the character collection 288 "Multilingual Latin Subset" in the current FCD. This character collection contains the characters which can be input by means described in the current version of the keyboard standard ISO/IEC 9995-3. However, the current draft of the German keyboard standard DIN 2137 has added U+2E3A TWO-EM DASH to the list of imputable characters by extending that means, and Germany will request to add this character to ISO/IEC 9995-3 on the next due revision. Proposed change by Germany
Germany requests the addition of U+2E3A TWO-EM DASH to the character collection 288 "Multilingual Latin Subset".

## Withdrawn

Although the comment is withdrawn, there is need to fix discrepancy on the description of the collection 288 in ISO/IEC 10646.
That collection was never part of an amendment and was added directly to the text of $106462^{\text {nd }}$ edition per resolution WG2 M55.11. The intent of the addition as reflected in documents N3685 and N3704 has an ambiguous aspect, which is either the collection should be 'fixed' or not. N3685 used the following line:
284 MIS-1 see A.4.4 *
[284 and MIS-1 were tentative values which were changed into 288 and MULTILINGUAL LATIN SUBSET] The '*' typically denotes a fixed collection, but the resolution M55.11 (part of N3704) did not clarify that point. The $2^{\text {nd }}$ edition of 10646 does not have '*'after 288, but in sub-clause A.5.8 the collection 288 is mentioned as 'fixed'. To fix that discrepancy, $a^{\prime * '}$ will be added in sub-clause A. 1 for collection 288.

## Ireland, Negative

Ireland disapproves the draft with the editorial comments given below. Acceptance of these comments and appropriate changes to the text will change our vote to approval.

## Technical comments

## T1. Page 219, Row 1BC: Batak

Ireland reiterates its support for the characters being balloted at 1BFA and 1BFB. Ireland opposes the removal of these characters from the CD as it has been demonstrated that they have been set in lead type as text elements, regardless of the fact that the glyphs in handwritten manuscripts are often larger and more ornate. We note that the same could be said for illuminated initial Latin letters in the Book of Kells. We would favour reducing the size of
 to indicate the beginning of documents, just as similar characters in Tibetan and Sundanese and Javanese do.

## Noted

Page 4 of 16

## T2. Page 1063, Row A72: Latin Extended-D

Ireland reiterates its support for the character being balloted at A78F, LATIN LETTER GLOTTAL DOT. Ireland opposes the removal of A78F LATIN LETTER GLOTTAL DOT from the FCD. We note that WG2 has changed its name from LATIN LETTER MIDDLE DOT (as it was in the CD) to prevent any confusion between this letter and the punctuation mark 00B7 MIDDLE DOT. The character is required for use as a phonetic letter (not a punctuation mark) in transcriptions of Tangut and Chinese, and our approval of this ballot is in part contingent upon the retention of this letter in the Standard.

## Noted

See disposition of comment T1 from US.

## T3. Page 1211, Row 109A: Meroitic Cursive

Because of the appearance of a recent article by Jochen Hallof in Beiträge zur Sudanforschung vol. 10 (2009), entitled "Ein meroitisches Zahlenostrakon aus Qasr Ibrim", presenting Meroitic numbers from 1 up to 900,000, Ireland requests the removal of the Meroitic fractions and numbers of the characters 109C0..109F0 from the FCD pending further study. We hope to have this study complete before the Helsinki meeting.

## Accepted

The study was not completed before the disposition if comment in Helsinki. Therefore, the following characters are removed from the Meroitic Cursive block:
(109C0..109CA, 109CC..109D9, 109DB..109DC, 109DE..109E5, 109E7..109E9, 109EB, 109F0)
The remaining characters and the block size stay unchanged.

## Editorial comments

## E1. Page 124, Row 098: Bengali

Ireland recommends that the rather inconsistent font used for Bengali be replaced with the one given in the table shown below. [see chart at end of this document]

## Not accepted

The table should be reviewed by experts before approval, especially concerning these points:

- Horizontal position of combining marks,
- Significant glyph changes (e.g. 09C2, 09C4)
- Relative size of Bengali-specific additions (09F0-09FB) to the rest.

## E2. Page 259, Row 20D: Combining Diacritical Marks for Symbols

Ireland recommends that the erroneous dotted circles in $20 \mathrm{E} 4,20 \mathrm{E} 5,20 \mathrm{E} 6,20 \mathrm{E} 7$, and 20 E 8 be corrected.

## Accepted

## E3. Page 1080, Row AAE: Meetei Mayek Extensions

Ireland suggests that the chart glyph for AAF6 should be harmonized with that for 1039, 1A60, and 10A3F.
Accepted
This means that a new dotted circle will be added within the frame, similarly to the presentation used for 1039, $1 A 60$ and 10A3F.

## E4. Page 1223, Row 1110: Chakma

Ireland suggests that the chart glyph for 11133 should be harmonized with that for 1039, 1A60, and 10A3F.
Accepted
See comment E3.

## E5. Page 1320, Row 1F0A: Playing Cards

Ireland recommends that the font used for Playing Cards be replaced with the one given in the table shown below.
The shapes of the suits and the face cards are more distinct in the new font, and are more recognizable.
[see chart at end of this document]
Accepted

## Japan, Negative

## JP. 1 (Editorial): Foreword, last paragraph

"ISO/IEC 10646:2010" is wrong.
Proposed change by Japan
"ISO/IEC 10646:2011"
Accepted
JP. 2 (Editorial): Sub-clause 4.4, Note
"(see 0)" is wrong.
Proposed change by Japan
"(see 4.23)"
Accepted

## JP. 3 (Editorial): Sub-clause 9.1, Table 2

On the third row, the first letter " $z$ " is mistakenly capitalized.
Proposed change by Japan
"zzzzyyyyyyxxxxxx"
Accepted

## JP. 4 (Editorial): Sub-clause 9.2, Table 4

On the first row, the first letter "x" is mistakenly capitalized.
Proposed change by Japan
"xxyxxxyxyxxyxxx"
Accepted
JP. 5 (Editorial): Sub-clause 11, Note 2 (end of)
"ISO/IEC 6492" is wrong.
Proposed change by Japan
"ISO/IEC 6429"

## Accepted

## JP. 6 (Technical): Sub-clause 16.5, Variations selectors and variation sequence, Note 2

This note explicitly cites the "version 2007-12-14" of IVD. However, the UTS\#37, normatively referred to by 10646, designates the IVD as "http://www.unicode.org/ivd", with no version indication, that always refers to the latest version of IVD. So the IVSes allowed in 10646 is those listed in the latest version of the IVD.
Proposed change by Japan
Change " version 2007-12-14" to "version 2010-11-14" in the text. (URL is correct.).
Accepted
See also comment $T 1$ from UK.

## JP. 7 (General): Sub-clause 23.5 and 31.3, Code charts for CJK Compatibility Ideographs and their format <br> The new code charts for CJK Compatibility Ideographs have problems: (a) Representative glyphs for KP-source compatibility ideographs seem not from the corresponding KP source standards; (b) Each cell now shows the corresponding unified ideograph let by " $\equiv$ " sign with a representative glyph, and Japan considers it is not a good idea to show only one representative glyph (especially that from a different source group than the compatibility ideograph is from.) <br> Proposed change by Japan <br> Revert the code charts and the explanation of the code chart format, i.e., use the single column format as before. Otherwise, update the code charts appropriately (under the new format.) <br> Not accepted

- Concerning item a) (glyph differences from KP source standard), the new chart uses the same DPRK source font that was used to represent glyph in the single column format. If there are differences between any published DPRK standard and the current chart, explicit evidences should be provided to the editor.
- Concerning item $b$ ) (unified ideograph let by " $\equiv$ " sign) the single column format has the same issue, so reverting to the old format would not improve the situation.
The editor is open to suggestion in how to describe the unified ideograph (at the right of the "三" sign) if other NBs see the need. It is also possible to create tables to pick another glyph for the 'unified' ideographs, including selecting the unified ideograph from the same source if the compatibility ideograph has a single source. However, that would be an issue for compatibility ideographs that have multiple sources.
The Japanese NB and other experts are invited to make contribution on this topic.
On the context of the FCD of the $3^{r d}$ edition, most experts see the new format as a significant improvement and because all issues raised by Japan already exist in the previous format, there is no need to revert back to it.

## JP. 8 (General): Sub-clause 31.3, Name lists for CJK compatibility ideographs

The new name lists for CJK compatibility ideographs have problems: (a) Some classification (grouping) doesn't make sense and confuse readers rather than help understanding (e.g., J3-763B is classified under "Pronunciation variants from KS X 1001:1998" but it is absolutely not); (b) Many of additional information led by " $\rightarrow$ " seem inappropriate and don't make sense..
Proposed change by Japan
Revise the list accordingly

## Accepted in principle

The grouping (item a) is the same as the single column format, so this is not a new issue, even if the new multicolumn format reveals some limitation of the grouping. The issue mentioned by Japan concerning J3-763B arose because Japan recycled a KS X entry for its own usage, and because J sources are ordered before $K$ sources, the J sources appear first.
The grouping issue will be solved by adding annotation in relevant groups (such as KSX 1001:1998 for F900-FAOB), explaining that that they may contain characters from other sources not related to these categories. Concerning b), the additional information pointed to by (such as for F9B8 and FAD4) are appropriate and describes original mapping errors that cannot be fixed because of mapping immutability. The editor is open to suggestion to better describe the issues if current text does not make sense to some NBs.

## JP. 9 (General): Sub- clause 31.3 Code chart for CJK Ideographs Extension C and D

Japan understood that those code charts are exactly as in their corresponding amendments, but they are revised unexpectedly in the 2 nd edition. Japan considers those in the amendments are better. Moreover, [more text missing?].
Proposed change by Japan
Revert the change

## Not accepted

There should not be any difference between the $2^{\text {nd }}$ and $3^{\text {rd }}$ edition. Concerning Extension $C$, the production tool changed significantly between the Amendment that added it (Amd5) and these new editions. This has introduced some errors such as $2 A A C 9$ that have been captured (ref SC2 N4176) and will be fixed in this edition. In addition, Taiwan also went through a revision of its Ext C source characters. All this to say that these blocks are not static and can evolve after an amendment is adopted. Furthermore, it is not possible to revert to the original Amendment 5 production environment.
Concerning ext $D$, the editor is not aware of any issue but will fix any if made aware of specifics.

## JP. 10 (General): Sub- clause 31.3 Code chart for CJK Ideographs Extension B

Reflect the review report by IRG
Proposed change by Japan
Update accordingly
Accepted

## JP． 11 （Editorial）：Sub－clause A．4．3，Last sentence

＂See 0＂is wrong．
Proposed change
＂See 23．1＂
Accepted

## JP． 12 （Editorial）：Sub－clause A．5．5，First bullet

＂See 023．1＂is wrong．
Proposed change
＂See 23．1＂
Accepted

## JP． 13 （Editorial）：Annex M，Glagolitic

Title of ISO 6861 is wrong；it lacks a word＂alphabet＂．
Proposed change
Insert＂alphabet＂as＂Glagolitic alphabet coded＂
Accepted

## JP． 14 （Editorial）：Annex M，Latin

Title of ISO 6937 is wrong；a singular word＂set＂is mistakenly spelled as＂sets＂．
Proposed change
Change＂sets＂to＂set＂as＂Coded graphic character set＂
Accepted

## JP． 15 （Editorial）：Annex I．1．2，Row for＂SURROUND FROM BELOW＂in Table I． 1

The＂IDS examples represents＂column for the row is inappropriate，because it shows 土 inside while the corresponding IDS has 士 as D2．
Proposed change
Use a correct picture as in the 2003 edition．
Accepted in principle
This edition code characters for this table，but the example will use 2067D $\pm$ instead of $51 F 7$ 塙．This will be then equivalent to the example shown in the 2003 edition．

## JP． 16 （General）：Clause S．1．4．3，Chart of examples

（The same comment has been submitted as a part of the ballot comment against FDIS 10646 2nd Ed．）
Project editor introduced several issues by his changes to Annex $S$ examples．IRG discussed on many of them and reverted most of the problematic changes．However，changes on S．1．4．3 were not found until recently．
The circled examples in the following chart taken from the current draft have problems because they don＇t make any sense or they change the intension of examples：

when compared to the corresponding examples in the 2003 edition of ISO／IEC 10646：

The first two circled examples in the current draft don't make any sense, because there is no chance that one thinks two ideographs with the components are subject to unification; while corresponding examples in 2003 edition are helpful because many experienced users of ideographs may misunderstand two ideographs with the components can be unified.
The last four circled examples in the current draft are valid; they show misleading cases. However, the examples in the current draft have less value than those in the 2003 edition, because they appear the cases are only applicable to the specific combinations of components as shown, while in 2003 edition the corresponding examples covered any patterns combined with the shown components.

## Proposed change

Revert the examples in S.1.4.3 to those in 2003 edition.

## Accepted in principle

The intent of the update was to update the example content from picture based to font based to provide a better quality document. Because sometimes, examples are not actual ideograph but fragment that are not separately encoded, this has proved challenging. As in the sub-clause S.1.5, some of the examples will be reversed back to pictures when no good alternative exists.

The examples from the 2003 edition for which there are no font based solution will be reverted to pictures. This will address all 'circled' cases. Worth noting that in the following examples:

One or more glyph in each pair is only represented in the standard as component, therefore these pair should also be represented with dotted rectangles as well.

## JP. 17 (Technical): Sub-clause S.1.6, G-Source

The list of G-source standards is updated from 2nd Ed. by adding two new ones: GB 12052-90 and GB 15564-1995. Japan believes adding them here is wrong, since this particular subclause is primarily a record of what we did when we created the very first CJK UNIFIED IDEOGRAPHS block and we didn't see these two standards.
Proposed change
Remove "GB 12052-90" and "GB 15564-1995".
Accepted
Some of the G sources characters were not in any of the original sources as previously described in the standard. Appropriately, the 2 new sources mentioned above were added to the $G$ source list in sub-clause 23.1. However, none of the characters originated from these 2 sources are affected by the source separation rule described in S.1.6.

As a result of these dispositions Japan changes its vote to Positive

## Korea（ROK）：Negative

R．O．Korea will change its vote to＂Yes＂if the following request is accepted．

## Technical comments：

## T1 Annotations for U11xx and U31xx

```

## －－－

## Accepted in principle

Similar requests have been made in previous ballots concerning the $2^{\text {nd }}$ and $3^{\text {rd }}$ edition which were all withdrawn during comment disposition．These requests were trying to add annotation for all 50 Hangul Compatibility Jamos （3131－318E）．This is now replaced by annotation requests for 36 possibly visually confusable characters：
a） 30 Jamos（in area 1100－11FF），including 20 initial consonants（Choseong）， 1 medial vowel（Jungseong）， and 9 final consonants（Jongseong）and
b） 6 Hangul Compatibility Jamos in area 3130－318F）
The annotations for the 9 final consonants are identical to the related initial consonants with one exception：110B HANGUL CHOSEONG IEUNG（zero sound）versus 11BC HANGUL JONGSEONG IEUNG（velar nasal consonant），and the 6 Hangul Compatibility Jamos are again a subset of the consonant／vowel annotated in the 11xx block．

In addition，the terms＇affricate，fricative，and stop＇denote consonant and make the ending＇consonant＇ unnecessary in those instances．Finally，the term＇unaspirated glottalized＇is typically not used as a contrasting version of＇lenis＇，but instead the term＇fortis＇should be used．

```
As a result of these findings, the following annotations will be added:
Hangul Jamo block (1100-11FF)
1109 ^ HANGUL CHOSEONG SIOS
- voiceless lenis alveolar fricative

## United Kingdom: Positive with comments

## Editorial comments

## E.1. Sub-clause 16.5

"This International Standard incorporates by reference the variation sequences listed in version 2007-12-14 of the Ideographic Variation Database"
The version referenced should be "2010-11-14"
Proposed change:
Change to:
"This International Standard incorporates by reference the variation sequences listed in version 2010-11-14 of the Ideographic Variation Database".

## Accepted

See also comment JP6 from Japan.

## E.2. Sub-clause 23.1

The G-source "ZhongHua ZiHai" is incorrectly capitalized.
Proposed change:
Capitalize as "Zhonghua Zihai"
Accepted

## E.3. Sub-clause 23.2, 23.4

"2nd field: Radical-Stroke index ( $\mathrm{d}\{1,3\}$ '.d $\{1,2\}$ ). This informative field contains radical index (one to three digits), optionally followed by an apostrophe for alternate index, followed by a full stop, and ending by one or two digits for the stroke count. NOTE 2 - All ideographs are classified following radical/stroke indexes in various CJK dictionaries. The primary value provided in this field is the most common one, while alternate indexes provide variant values also in use. More information is available in the Unicode Standard UAX\#38 Unicode Han Database at http://www.unicode.org/reports/tr38/."
The description of the Radical-Stroke index in 23.2 and 23.4 is confusing. Firstly, the optional apostrophe following the radical index indicates a simplified form of the radical, not an "alternate index". Secondly, in 23.2 Note 2 it is not clear what the "alternate indexes" refer to; it could be read to mean that multiple radical-stroke indexes are provided in this field (a primary index and alternate indexes), although only a single radical-stroke index is given for each character.
Proposed change:
In 23.2 change to:
"2nd field: Radical-Stroke index ( $\mathrm{d}\{1,3\}$ '. $\mathrm{d}\{1,2\}$ ). This informative field contains a radical index (one to three digits), optionally followed by an apostrophe for simplified radicals, followed by a full stop, and ending with one or two digits for the stroke count. NOTE 2 - All ideographs are classified following radical/stroke indexes in various CJK dictionaries. The value provided in this field is the most common one. More information is available in the Unicode Standard UAX\#38 Unicode Han Database at http://www.unicode.org/reports/tr38/."
In 23.4 change to:

# "3rd field: Radical-Stroke index ( $\mathrm{d}\{1,3\}$ ' $\mathrm{d}\{1,2\}$ ). This informative field contains a radical index (one to three digits), optionally followed by an apostrophe for simplified radicals, followed by a full stop, and ending with one or two digits for the stroke count." <br> <br> Accepted 

 <br> <br> Accepted}

## E.4. Clause 29

"The TIP (plane 03) is used for ancient ideographic scripts that are related but not classified as CJK unified ideographs. No character is encoded in the TIP."
The grammar of these two sentences is awkward.
Proposed change:
Change to:
"The TIP (plane 03) is used for ancient ideographic scripts that are related to but not classified as CJK unified ideographs. No characters are currently encoded in the TIP."

## Accepted

## E.5. Clause 30

"The SSP (plane 0E) is used for special purpose use graphic characters."
Tag characters in the SSP are format characters not graphic characters.
Proposed change:
Change to:
"The SSP (plane 0E) is used for special purpose use graphic characters and format characters."

## Accepted

## E.6. Sub-clause S.1.4.3

Some of the examples illustrating different structure of corresponding ideographic components are incorrect or suboptimal compared with the examples given in the 2003 edition of the standard. In particular the 3rd and 9th examples show pairs of unrelated components that could not be mistaken as being subject to unification.
Proposed change:
Revert to the examples given in ISO/IEC 10646:2003 S.1.4.3.
Accepted in principle
See disposition of comment JP16 from Japan.

## USA: Negative with comments

## Technical comments:

## T.1. Latin Extended-D

We reiterate that this character is unnecessary and is a damaging duplication for the standard and should be removed from the amendment. The change of name to "GLOTTAL DOT" only introduced additional problems, for it specifically mentions the function of the character, and opens the door for potential future requests for "non-glottal" middle dot letters as well.
Justification for the request to remove this character is contained in N 3678 (L2/09-278). A viable alternative to encoding a separate letter middle dot, for the purposes cited by the original proposal, would be to use the already encoded modifier letter, U+02D1 MODIFIER LETTER HALF TRIANGULAR COLON.
Proposed change:
The U.S. objects to the renaming of LATIN LETTER MIDDLE DOT from the original amendment to U+A78F LATIN LETTER GLOTTAL DOT, as it is a middle dot, and requests the removal of this character.

## Accepted in principle

The proposed character is renamed LATIN MIDDLE DOT and pushed to the next amendment in the same proposed location: $U+A 78 F$ for further feedback.
See also comments $T 4$ from Germany and $T 2$ from Ireland.

## T.2. Batak

The evidence provided in N3320 does not demonstrate these marks to be characters, but rather to be graphic page elements that do not behave at all as characters.
Compare the following two figures from N3320.
U+ 1BFA BATAK SYMBOL BINDU GODANG in figure 11:

U+1BFB BATAK SYMBOL BINDU PINARJOLM in figure 13 :

In the above examples, it is clear that the symbols are large ornaments, with text wrapping underneath them. In our assessment such elements should be represented by images, textual markup, or other mechanisms rather than being encoded as single characters.
Proposed change:
The U.S. requests the removal of the following two characters:
1BFA BATAK SYMBOL BINDU GODANG
1BFB BATAK SYMBOL BINDU PINARJOLM
Accepted

## T.3. Optical Character Recognition

The names for $U+2448$ and $U+2449$ are Magnetic Ink Character Recognition (MICR) symbols used by banks on checks. The two characters U+2448 and U+2449 originally encoded in 10646-1:1993 were inadvertently mixed up; as a result their current names are misleading about their identity. The formal aliases provide the correct names. Additional corroboration is provided on the following websites: http://www.barcodesoft.com/e13bmapping.htm http://en.wikipedia.org/wiki/Magnetic_ink_character_recognition http://www.printerm.com/fonts2C.htm http://mindprod.com/jgloss/micr.html
Proposed change:

The U.S. asks two formal name aliases be added as listed below:
a. U+2448 OCR DASH

Add the following formal alias: 2448 MICR ON US SYMBOL
b. U+2449 OCR CUSTOMER ACCOUNT NUMBER

Add the following formal alias: 2449 MICR DASH SYMBOL

## Accepted

## T.4. NUSI.txt

Adding named sequences for 2 symbols from ISO/IEC 9995-7 is premature, pending a complete analysis of the encoding requirements for the repertoire of symbols from that keyboard standard.
Proposed change:
The U.S. requests the removal of the following two named sequences, as requested in N3897:
U+21F3 U+20E2 KEYBOARD SYMBOL SCROLLING
U+2139 U+20E2 KEYBOARD SYMBOL HELP

## Accepted

## Editorial comments:

## E.1. CJK Fonts

The U.S. is aware of a large number of glyph errors in Extension B fonts that have been discovered in the course of IRG and national body review. These glyph errors must be fixed before publication of the third edition.

## Accepted

See comment JP10 from Japan

## E.2. Arrows

The proposed glyph changes, as proposed in N3897, need further review, as part of the full analysis of the encoding requirements for the repertoire of symbols from the ISO 9995-7 keyboard standard.
Proposed change:
The U.S. requests the glyph changes for U+21E6-U+21F0 and U+21F3 in the Arrows block, as included in the current ballot, be reverted. While the U.S. is open to improvements to glyphs, the new glyphs are out of sync with the set of arrows at $\mathrm{U}+2 \mathrm{~B} 00-\mathrm{U}+2 \mathrm{~B} 04$ in the Miscellaneous Symbols and Arrows block.

## Accepted

As a result of these dispositions US NB changes its vote to Positive
